DETERMINING A NODE PATH
THROUGH A NODE GRAPH

ABSTRACT

5   Determining a node path through a node graph includes

modifying the node graph in accordance with a predetermined

platform performance, performing a path finding process

through the node graph to obtain the node path, determining if

the platform performance has changed, adjusting the node graph

10   to compensate for a change in the platform performance, and

re-performing the path finding process through the adjusted

node graph to obtain the node path.
